Practice explores the historical and evolving role of the doctorally-prepared Advanced Practice Registered Nurse (APRN). Because the role of the DNP graduate is evolving, the primary authors and contributing authors of this text present positions and reflective responses that represent a diverse range of current views on the DNP role and the diverse ‘ideals’ of what the role of the doctorally-prepared APRN should be. This is also the first text to market that exclusively examines the evolving and expanding role functions of the DNP graduate. Too often, nursing texts offer the sole view of the role of the DNP graduate which currently predominates: practitioner, clinical executive, educator, and clinical trials research scientist, as well as the role of the clinical scholar which each graduate is expected to be. Section III: covers the diverse skills that comprise the doctoral APRN role; including leadership content, negotiation skills, and leveraging technology to support doctoral advanced level practice; debate over the DNP Exam; discussion of DNP grades using the title “Dr”; and how the doctoral APRN can use their new competencies to function at a higher level. The Future of Nursing: Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses’ roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America’s increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses have valuable abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor’s degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles – including limits on nurses’ scope of practice – should be removed so that the health care system can reap the full benefit of nurses’ training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
